SUMMARY

Full-stack developer specializing in modern JavaScript frameworks (Next.js, Nuxt.js, Astro) with experience building scalable web applications for clients and open-source projects. Proven ability to translate design specifications into production-ready solutions, integrate

EXPERIENCE

Full Stack Web Developer

Freelance

May 2021 - Present

- Participated in engineering and developing open-source full stack web application using React, Next.js, and Typescript.
- Helped clients turn ideas and concepts into functional websites and applications.
- Created various projects using a variety of libraries such as TailwindCSS, Material UI, Bootstrap, and many more.
- Developed scalable backend solutions using Node.js and serverless platforms (Cloudflare Workers and Vercel), enhancing application performance and reliability across multiple platforms.

Front-end Web Developer

RWND Media

April 2025 - May 2025, Austin, TX

- Developed a high-performance marketing landing page using Astro framework, translating Figma designs into optimized static site generation for enhanced loading speeds and SEO performance.
- Implemented pixel-perfect UI from design specifications with strategic hero section placement and prominent call-to-action directing visitors to integrated contact forms.
- Built interactive accordion component system from Figma mockups to showcase company core values through expandable card interfaces, improving content organization and user engagement.
- Converted design assets into functional partner showcase with dynamic logo cloud display highlighting current business relationships and establishing credibility with potential clients.
- Delivered faithful implementation of design vision that effectively communicates RWND's value proposition while optimizing for lead generation and partner visibility.
- Transformed static design mockups into clean, maintainable codebase using Astro's component-based architecture to ensure easy future updates and content management.

Full Stack Web Developer

Waddle Management

March 2025 - March 2025

- Developed a full-stack artist management platform, featuring a responsive hero section and dynamic artist roster with integrated name, image, and biography displays.
- Built and deployed a comprehensive content management system with admin interface enabling real-time roster updates and artist information management.
- Designed and implemented interactive UI components including information cards and call-to-action elements to enhance user engagement and site functionality.
- Created an administrative dashboard allowing non-technical staff to easily update artist profiles, manage content, and maintain site information without developer intervention.
- Engineered a scalable web application architecture combining front-end presentation layer with back-end data management to support growing artist roster and content needs.
- Delivered a professional artist showcase website that streamlined the presentation of talent roster while providing seamless content management capabilities for the management team.

PROJECT

discordtools.io

discordtools.io

- Architected and developed a comprehensive Discord utilities platform from scratch using Nuxt.js (Vue.js), Nuxt UI, and Tailwind CSS, providing power users with server management and inspection tools.
- Implemented Discord API integration features including server count analytics, detailed insights dashboard, Discord ID inspection, and server icon preview functionality.
- Created advanced Discord message formatting tools with date and time formatting utilities to streamline communication workflow for power users.
- Designed and deployed production-ready web application with optimized performance using Nuxt's server-side rendering capabilities and responsive component-based architecture.

- Delivered end-to-end project ownership from initial concept and technical architecture through final deployment, addressing specific Discord power user pain points.

FixBluesky

- Developed open-source web service "FixBluesky" enabling Bluesky post embeds in Discord, solving a key social media integration gap by allowing seamless link sharing between platforms.
- Built lightweight URL manipulation tool that transforms Bluesky links (bsky.app) into embeddable format through simple character replacement (k → y), providing intuitive user experience.
- Created social media integration solution inspired by established tools like FixTweet, demonstrating ability to identify and replicate successful patterns for emerging platforms.
- Engineered cross-platform compatibility service facilitating better content sharing and community engagement across Discord and Bluesky ecosystems.
- Delivered production-ready open-source project with clear documentation and simple implementation, contributing to the developer community and social media tooling ecosystem.

Embedly

July 2025 – Present

- **Architected and developed a Discord bot addressing broken social media embed limitations**, processing Twitter/X, TikTok, and Instagram links to provide enhanced content previews where native Discord embeds fail.
- **Built scalable monorepo architecture using TypeScript and Turborepo**, with separate API server and Discord bot applications, enabling modular development and efficient deployment workflows.
- **Engineered platform-specific content parsing system** with custom builder utilities to extract rich media, metadata, and contextual information from social platforms while handling anti-scraping measures and API restrictions.
- **Created a user-friendly bot interaction system** with customizable response messages and automated embed replacement, improving Discord community engagement through better content sharing experiences.
- **Delivered production-ready Discord bot** serving multiple servers with enhanced social media integration, addressing platform limitations that affect millions of Discord users daily.

SKILLS

Node.js, Typescript, React, Vue, Astro, Tailwind, HTML, CSS, JavaScript
